Recommendation

Yes

Comments: It is a beautiful and well-structured textbook. I support its adoption.

At the same time, I do have recommendations for the future development of the material:

- It is not tailored to Florida very much. The examples are mostly from environment that do not occur in Florida and that Florida's students will not find familiar.

- There is very little treatment of invasive species, which is one of the major environmental issues anywhere in Florida.

- One thing I find a little bit frustrating about many biology/environment textbooks is that they only instruct on how to do research indoors. But nature and the environment is all out there! I am afraid that the most important message that we want students to take away - that the environment is amazingly complex but also in a very bad shape - will be completely missed if all the exercises are done in a sterile classroom. The standards call for the development of independent thinkers, yet all the "experiments" have totally predictable outcomes. There is virtually no room for any interesting discovery.

- I am very proud of the fact that this book treats anthropocentric damage to the environment clearly. I would like to see even a bigger emphasis on it (given that this is a topic that these young people will deal with most of their lives) but it is already nice as it is now.

- There is plenty of guidance on how to gather and synthesize EXISTING information from different formats and sources. But the most important part of science - generating NEW information independently from nature by observation, discovery and insight - is rarely presented. It will probably make environmental science feel rather distant from most kids' lives.

Otherwise it is great!

When looking at standards alignment reviewers should consider not only the robustness of the standard coverage but also the content complexity (depth of knowledge level) if appropriate. More information on content complexity as it relates to Florida standards can be found at:

http://www.cpalms.org/Uploads/docs/CPALMS/initiatives/contentcomplexity/CPALMS_ccdefinitions_140711.pdf

For example, if the standard is marked as a level 3 (strategic reasoning and complex thinking) then the materials coverage should reflect this. If the materials coverage is only sufficient to allow for recall (level 1) then this should be reflected in the points assigned.

27. **SC.912.N.1.2:** Describe and explain what characterizes science and its methods.

Remarks/Examples:

Science is characterized by empirical observations, testable questions, formation of hypotheses, and experimentation that results in stable and replicable results, logical reasoning, and coherent theoretical constructs.

Florida Standards Connections: MAFS.K12.MP.3: Construct viable arguments and critique the reasoning of others.

VERY GOOD ALIGNMENT GOOD ALIGNMENT FAIR ALIGNMENT POOR ALIGNMENT VERY POOR/NO ALIGNMENT

Justification:

28. **SC.912.N.1.3:** Recognize that the strength or usefulness of a scientific claim is evaluated through scientific argumentation, which depends on critical and logical thinking, and the active consideration of alternative scientific explanations to explain the data presented.

Remarks/Examples:

Justification:

32. **SC.912.N.2.1:** Identify what is science, what clearly is not science, and what superficially resembles science (but fails to meet the criteria for science).

Remarks/Examples:

Science is the systematic and organized inquiry that is derived from observations and experimentation that can be verified or tested by further investigation to explain natural phenomena (e.g. Science is testable, pseudo-science is not science seeks falsifications, pseudo-science seeks confirmations.)

33. **SC.912.N.2.2:** Identify which questions can be answered through science and which questions are outside the boundaries of scientific investigation, such as questions addressed by other ways of knowing, such as art, philosophy, and religion.

Remarks/Examples:

Identify scientific questions that can be disproved by experimentation/testing. Recognize that pseudoscience is a claim, belief, or practice which is presented as scientific, but does not adhere to strict standards of science (e.g. controlled variables, sample size, replicability, empirical and measurable evidence, and the concept of falsification).

VERY GOOD ALIGNMENT GOOD ALIGNMENT FAIR ALIGNMENT POOR ALIGNMENT VERY POOR/NO ALIGNMENT

Justification:

34. **SC.912.N.2.4:** Explain that scientific knowledge is both durable and robust and open to change. Scientific knowledge can change because it is often examined and re-examined by new investigations and scientific argumentation. Because of these frequent examinations, scientific knowledge becomes stronger, leading to its durability.

Remarks/Examples:

Recognize that ideas with the most durable explanatory power become established theories, but scientific explanations are continually subjected to change in the face of new evidence.

Remarks/Examples:

Explain that a scientific theory is a well-tested hypothesis supported by a preponderance of empirical evidence.
