APPENDIX R

STUDENT SURVEY CHECKLISTS

Purpose and Use: The checklists in this appendix are for each of the PK-12 student surveys, and are intended for school district use in the preparation, processing, verification and update of each DOE Information Database PK-12 student survey. They have been designed to assist the district MIS and data processing staff in determining that no important step has been omitted in the process, all data have been submitted, errors have been corrected and the expected results for the survey have been achieved. Districts are urged to use these checklists or to customize them to suit the needs of the district.

The following is an explanation of each of the major headings on the checklists:

Timeline: Appendix B of this manual lists the timelines for each PK-12 student and staff survey. These timelines include the survey dates, due date, state processing window, and last day of the update window.

Record Formats: The record formats listed are the ones to be reported for the survey. It is essential that district staff determine that the latest version of the format for the reporting year is being used. It is also important that district staff study the record formats to determine which students and which data elements are to be reported for the survey.

Useful information can be found on the cover pages of each record format.

POTENTIALLY PROBLEMATIC DATA ELEMENTS BY RECORD FORMAT: The district needs to pay close attention to the data elements listed in this section. These elements are not necessarily the most important for the survey. They are elements that have been problematic in the past as far as quality and accuracy of reporting are concerned. The district needs to be certain that these elements are accurate for each student/staff member reported in the survey. Remember, after the close of the state processing window for each survey, reports and files are generated to fill data requests and to create publications.

Consequently, it is important that reported data are accurate when the state processing window closes.

Datasets Loaded to Database: District MIS and data processing staff must check initial edit reports and/or the Edit Status Tables of the on-line programs to be certain that all initial datasets submitted by the district have loaded to the database. Making this determination can save valuable time in the long run.

Validation/Exception Reports: These reports must be requested by the district after appropriate datasets have been loaded to the database. They are not automatically produced by Office of School Support (OSS). The requests should be made as early in the survey as possible to allow ample time for corrections to be made.

Reports Listing Records with Certain Errors That Will Cause FTE to be Nulled: In addition to the validation/exception reports, the reports listed in this section provide individual listings of Student Course Schedule records with FTE that will be nulled if certain errors are not corrected. These reports can be helpful in the correction process.

Reports Helpful for Reviewing Data Submitted: Once datasets have been submitted, these reports will give the district a view of certain kinds of information. They can be used to determine whether the data submitted have produced the expected results. In some instances, these reports will point out data problems which can be investigated and corrected prior to the close of the processing window. Since most of the reports are produced by school, they can be shared with school level staff for data verification.

Reports will run according to the published schedule.
